Dhaka, Bangladesh

OBJECTIVE

Computer Science and Engineering graduate from BRAC University with a strong focus on artificial intelligence and machine learning, particularly in deep learning and medical image analysis. Experienced in developing data-driven models and applying advanced techniques such as neural networks and computer vision to solve real-world problems. Eager to apply my skills in AI and ML to real-world challenges while gaining practical experience and contributing to innovative, data-driven solutions.

EXPERIENCE

- **Participant, Solvio AI Hackathon 2025** November 2025
Team Member Dhaka, Bangladesh
 - Collaborated in a team to develop Credit AI, an AI-powered micro credit scoring solution for underserved communities.
 - Implemented machine learning models to analyze financial and behavioral data for accurate credit scoring.
 - Presented the working prototype to judges, demonstrating real-world impact and scalability.

EDUCATION

- **BRAC University** October 2021 - January 2026
BSc in Computer Science and Engineering Dhaka, Bangladesh
 - CGPA: 3.81/4.00
- **Adamjee Cantonment College** 2020
Higer Secondary Certificate Dhaka, Bangladesh
 - GPA: 5.00/5.00
- **Monipur High School & College** 2018
Secondary School Cerificate Dhaka, Bangladesh
 - GPA: 5.00/5.00

SKILLS

- **Languages:** Python, C, C++, PHP, SQL, JavaScript, CSS, HTML
- **Machine Learning & AI:** Artificial Intelligence, Machine Learning, Deep Learning (CNN, ANN, RNN), Computer Vision, Medical Image Analysis
- **Frameworks:** Laravel, Django
- **Developer Tools:** Latex, GitHub, MySQL, Xampp, VS Code, Figma
- **Libraries:** Tensorflow, PyTorch, Scikit-learn, OpenCV, Numpy, Pandas
- **Platforms & OS:** Linux, Arduino, Rasberry Pi
- **Soft Skills:** Problem Solving, Critical Thinking, Teamwork & Collaboration, Communication Skills, Time Management

PROJECTS

- **Predicting Student Depression using Machine Learning** 2025
Tools: Python, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn 
 - Developed a predictive model for student depression using machine learning techniques to identify at-risk students.
 - Implemented Python-based ML algorithms (Random Forest, Logistic Regression, SVM) for accurate prediction, achieving high F1-scores.
 - Applied feature selection and data preprocessing methods to analyze key factors contributing to student mental health.
- **GameAid — Game Tracking & Community Web App** 2025
Tools: Laravel, PHP, MySQL, JavaScript, Bootstrap, CSS 
 - Built a web application for users to track game progress, rate played games, and interact with other players through a community system.
 - Implemented premium features and a robust admin panel for managing content, users, and moderation.

- **Neural Network Based Clustering of AG News Dataset**

2025

Tools: Sentence Transformer, t-SNE, Feed Forward Encoder, K-Means, Silhouette Score, Davies-Bouldin Index

- Developed a neural network-based encoder to cluster AG News articles, compressing high-dimensional embeddings into a 64-dimensional latent space.
- Implemented unsupervised clustering using K-Means with t-SNE visualization, evaluating cluster quality with Silhouette Score and Davies-Bouldin Index.
- Applied SentenceTransformer embeddings and self-supervised learning techniques to capture semantic structure and improve document representation.

- **Pac-Man Game**

2024

Tools: Python, OpenGL, Glut

- Developed an interactive Pac-Man game using Python and OpenGL, implementing smooth character movement and maze navigation.
- Implemented collision detection, food pellet collection, score tracking, and level progression for an engaging gameplay experience.
- Applied geometric transformations and OpenGL drawing primitives to render the maze, Pac-Man, and animations effectively.

RESEARCH

- **Deep Learning for Automated Renal Function and Anatomical Analysis from DMSA Scans**

2025-2026

Thesis

- Developed a deep learning-based system for automated kidney analysis using DMSA renal scans, improving diagnostic efficiency.
- Implemented a multi-stage pipeline using U-Net segmentation and ConvNeXt for anatomical and functional prediction.
- Handled real-world medical data challenges including class imbalance, multi-view fusion, and mask-guided learning for reliable clinical outputs.
